

## Research and development center Locket (CZ)

Our technical center for research and development is located in the historic town of Locket. Small parts and oven accessories such as burners, hot air throttle valves and lambda probe systems are also manufactured there.

### Heißluftdrosselklappen

Brenner

### Breitbandlambdasonde

### Heißgasbrenner

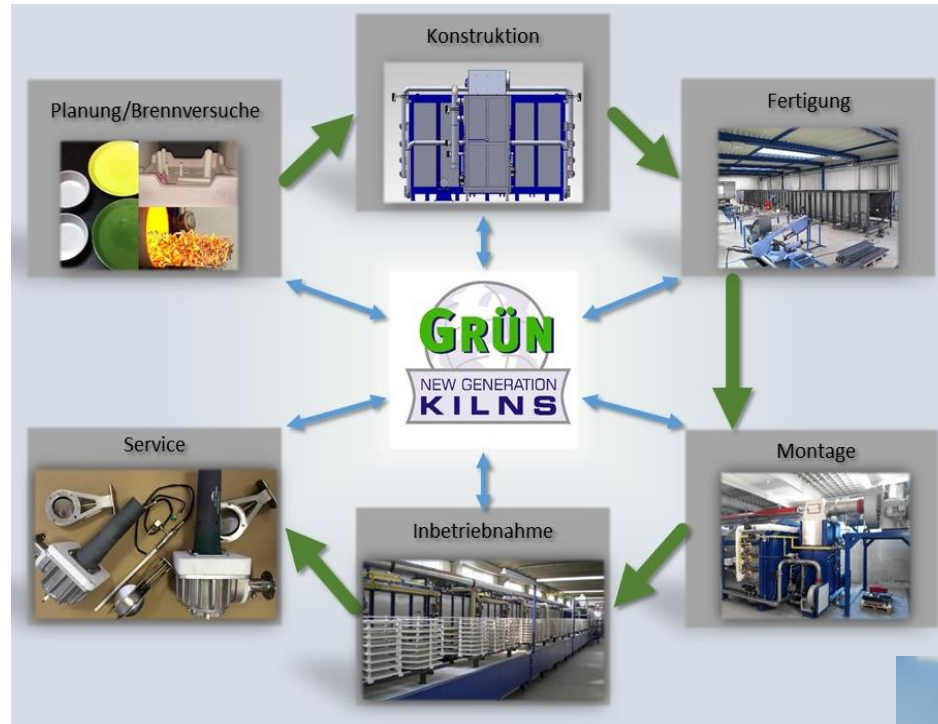

### Thermal post-combustion

As an option to our furnace systems, we offer complete flue gas cleaning systems for various applications. These special designs can be operated electrically or gas-fired at the customer's request.

### Heat exchanger systems

We manufacture the right heat recovery system for every application. We supply you with **Inconell** tube bundle, water or high-temperature **SiC** heat exchangers according to your requirements

### Production in Lützen (DE)

In order to better meet the individual requirements of our customers, we decided to establish a company in Germany in 2009. The new production site is located in the heart of Germany in Lützen (Zorbau), directly on the A9 motorway in the immediate vicinity of the efficient Leipzig-Halle Airport transport hub. We have been producing our new technologies here using high-quality manufacturing techniques since 2011.
